# » Digital Data Transfer «

## applications and file formats

- Adobe Illustrator CC
- Adobe InDesign CC
- Adobe Photoshop CC
- Quark XPress 2016
- ArtPro 18
- PDF/X-4

**Image file formats:** EPS, TIFF, PSD, JPEG (Lowest compression, in order to avoid quality losses.)

**Images:** Continuous tone images with a minimum resolution of 300 dpi. Line drawing: minimum of 800 dpi. Please note that nearly all images that are downloaded from the Internet or that are in JPEG or GIF format will be 72 dpi and not acceptable for the printing process. In case of sending data from the MS Office-Suite (Word, Excel, Powerpoint), only plain text without pictures is processable.

## abstract

Include all used characters sets/fonts. In layout- and illustration-applications is it possible to convert fonts to curves/paths. After the conversion text changes aren't possible! Please provide your images always separately. Don't embed them in your documents. If you knock-out images use clipping paths. Smooth shades and transparencies cause a lot of problems in the flexoprintprocess – please avoid if possible! Please use exact color names from the Pantone or HKS matching system. No general color names such as blue, red, yellow, green, etc.

## data transfer

**FTP:** <https://ftp.heinerich.de>

User: datenaustausch | Passwort: =Lmzk=tr5Z~uIF

**E-Mail:** [fact@heinerich.de](mailto:fact@heinerich.de)

If you transfer data, send a short information via email, phone. Large files should be compressed with StuffIt or WinZip if possible. Designate the data clearly, in order to facilitate the allocation.

## media

- DVD
- CD-ROM
- USB-Key

Always send a printout of the actual datas with your media.

**Any questions?**  
**We are happy to help.**
